H16-00693 CES and birds in CR (Version 1.0)

Principal Investigator: Kai Chan

1. Principal Investigator & Study Team - Human Ethics Application [\[View Form\]](#)

1.1. Principal Investigator Please select the Principal Investigator (PI) for the study. Once you hit Select, you can enter the PI's name, or enter the first few letters of his or her name and hit Go. You can sort the returned list alphabetically by First name, Last name, or Organization by clicking the appropriate heading.

Last Name	First Name	Employer.Name	Email
Chan	Kai	Institute for Resources, Environment and Sustainability	kaichan@ires.ubc.ca

Enter Principal Investigator Primary Department and also the primary location of the PI's Institution:

1.2. Primary Contact Provide the name of ONE primary contact person in addition to the PI who will receive ALL correspondence, certificates of approval and notifications from the REB for this study. This primary contact will have online access to read, amend, and track the application.

Last Name	First Name	Rank
Echeverri Ochoa	Alejandra	Graduate Student

1.3. Co-Investigators List all the Co-Investigators of the study. These members WILL have online access which will allow them to read, amend and track the application. These members will be listed on the certificate of approval (except BC Cancer Agency Research Ethics Board certificates). If this research application is for a graduate degree, enter the graduate student's name in this section.

Last Name	First Name	Institution/Department	Rank
Zhao	Jiaying	UBC/Science/Institute for Resources, Environment and Sustainability	Assistant Professor
Echeverri Ochoa	Alejandra	UBC/Science/Institute for Resources, Environment and Sustainability	Graduate Student

1.4. Additional Study Team Members - Online Access List the additional study team members who WILL have online access to read, amend, and track the application but WILL NOT be listed on the certificate of approval.

Last Name	First Name	Institution/Department	Rank
-----------	------------	------------------------	------

1.5. Additional Study Team Members - No Online Access Click Add to list study team members who WILL NOT have online access to the application and will NOT be listed on the certificate of approval.

Last Name	First Name	Institution / Department	Rank / Job Title	Email Address
-----------	------------	--------------------------	------------------	---------------

Tri Council Policy Statement2 (TCPS2) Tutorial All undergraduate and graduate students, medical residents and research staff are required to complete the TCPS2 Tutorial (CORE) before submission. The Principal Investigator and all Co-Investigators must be familiar with the TCPS2. Indicate completion of the TCPS2 (CORE) tutorial below: 1.6.A. All Undergraduate/Graduate Students:

Yes

1.6.B. All Medical Residents:	N/A (no medical residents participating in this study)						
Comments:							
1.7. Project Title Enter the title of this research study as it will appear on the certificate. If applicable, include the protocol number in brackets at the end of the title. If this is a class-based project, see guidance on the right. Title given must match the title on all study documents.	Can the functional traits of birds predict the cultural ecosystem services associated with them?						
1.8. Project Nickname Enter a nickname for this study. What would you like this study to be known as to the Principal Investigator and study team?	CES and birds in CR						
2 Study Dates and Funding Information - Human Ethics Application [View Form]							
You plan to start collecting data immediately after obtaining ethics and any other required approvals (the start date on the ethics certificate will reflect the approval date),	no						
You plan to start data collection at a later date i.e., 2 months or more after approvals are obtained. Click the calendar icon below to select the dates (Internet Explorer) or enter the dates manually using the format yyyy-mm-dd. Estimated start date:	May 23, 2016						
2.1. B. Estimated end date:	July 20, 2017						
2.2.A. Types of Funds Please select the applicable box(es) below to indicate the type(s) of funding you are receiving to conduct this research. You must then complete section 2.3 and/or section 2.4 for the name of the source of the funds to be listed on the certificate of approval.	Grant						
2.2.B. For Industry Sponsored studies, please provide a sponsor contact.							
2.2.C. Please enter any applicable information about your funding which is not already shown in Box 2.3 or 2.4 (including funding applied for but not yet received).							
2.3. Research Funding Application/Award Associated with the Study that was Submitted to the UBC Office of Research Services Please click Add to identify the research funding application/award associated with this study. Selecting Add will list the sources of all research funding applications that have been submitted by the PI (and the person completing this application if different from the PI). If the research funding application/award associated with this study is not listed below, please enter those details in question 2.4.	<table border="1"> <thead> <tr> <th>UBC Number</th><th>Title</th><th>Sponsor</th></tr> </thead> <tbody> <tr> <td>F14-04816</td><td>Ecosystem services and biodiversity in the context of system transformation</td><td>Natural Sciences and Engineering Research Council of Canada (NSERC)</td></tr> </tbody> </table>	UBC Number	Title	Sponsor	F14-04816	Ecosystem services and biodiversity in the context of system transformation	Natural Sciences and Engineering Research Council of Canada (NSERC)
UBC Number	Title	Sponsor					
F14-04816	Ecosystem services and biodiversity in the context of system transformation	Natural Sciences and Engineering Research Council of Canada (NSERC)					
2.4. Research Funding Application/Award Associated with the Study not listed in question 2.3. Please click Add to enter the details for the research funding application/award associated with this study that is not listed in question 2.3. When you press Add you can do a search for your funding award by doing a search in the Sponsor box - over 7000 options are listed	<table border="1"> <thead> <tr> <th>UBC Number</th><th>Title</th><th>Sponsor</th></tr> </thead> <tbody> </tbody> </table>	UBC Number	Title	Sponsor			
UBC Number	Title	Sponsor					

2.5.A. Is this a DHHS grant? (To view a list of DHHS funding agencies click on add in 2.5.B below)	no
2.5.B. If yes, please select the appropriate DHHS funding agency from the selection box, and attach the grant to box 9.8. of the application.	DHHS Sponsor List: Order: Active:
Attach DHHS Grant Application for each sponsor listed above	
2.6. Conflict of Interest Conflicts of Interest (COIs) can arise naturally from an Investigator's engagement inside and outside the University, and the mere existence of a COI or the perception of a COI does not necessarily imply wrongdoing on anyone's part. Nonetheless, real and perceived COI must be recognized, disclosed, and assessed. This question asks Investigators to disclose COIs that may relate to the research study that is the subject of the REB application. Do the Principal Investigator, Co-Investigators and/or their related parties (defined at s.8.12 UBC Policy 97) have any personal interest(s) that could compromise or reasonably be perceived to compromise the objective conduct of the research or the integrity of the data generated by the study? Personal interests may include business, commercial or financial interests, as well as personal matters and career interests.	no
4. Study Type - Human Ethics Application [View Form]	
4.1. UBC Research Ethics Board Indicate which UBC Research Ethics Board you are applying to and the type of study you are applying for:	UBC Behavioural Research Ethics Board
N/A	yes
4.2.A. Institutions and Sites for Study	Institution Site
4.2.B. Please enter any other locations where the research will be conducted under this Research Ethics Approval (e.g., Name of privately owned clinic, community centre, school, classroom, participant's home, in the field - provide details).	This research will be conducted in Nicoya, Cañas, Baces, and Sámará (which are all cities in the rural areas of Costa Rica's Nicoya Peninsula). This is a field study. Surveys will take place at sites convenient to participants--their offices, homes, or farms.
4* Behavioural Study Review Type [View Form]	
4.3.A. If this proposal is closely linked to any other proposal previously/simultaneously submitted, enter the Research Ethics Board number of that proposal.	
4.3.B. If applicable, please describe the relationship between this proposal and the previously/simultaneously submitted proposal listed above.	
4.3.C. Have you received any information or are you aware of any rejection of this study by any Research Ethics Board? If yes, please provide known details and attach any available relevant documentation in question 9.7.	no
4.4.A. External peer review details:	N/A
	This research constitutes a project conducted by a

4.4.B. <i>Internal (UBC or hospital) peer review details:</i>	graduate student (Alejandra Echeverri). The proposal has been reviewed by Alejandra's supervisory committee (Dr. Kai M.A. Chan, Dr. Jiaying Zhao, Dr. Daniel Karp)
4.4.C. <i>If this research proposal has NOT received any independent scientific/methodological peer review, explain why no review has taken place.</i>	This research poses minimal risk, so it is not required to have an independent scientific/methodological peer review.
Participant Vulnerability	Low
Research Risk	Low
4.5.B <i>Explain/justify the level of risk and group vulnerability reported above.</i>	The survey that we intend to conduct does not pose greater risks than those encountered by participants in their everyday life. Given that the questions that we will ask are about birds and past experiences with birds, we do not anticipate any psychological, physical, emotional or social risk.
4.5.C <i>Does your application fall under minimal risk (i.e., it was assigned an overall risk level of 1 on the minimal risk matrix) and therefore is eligible to be considered for Delegated Review?</i>	yes
4.6. Multi-Jurisdictional Studies <i>Is this study a multi-jurisdictional study that requires review by two or more REBs? (Note: If submitting an amendment for an already approved study, you must respond No to this question.)</i>	no
4* Behavioural Study Review Type (Q 4.7, 4.8) [View Form]	
4.7.A <i>Creation of a Research Database or Registry Does this study involve the creation of a research database or registry for future unspecified research? [if no, skip to 4.8]</i>	no
4.7.B <i>Is the purpose of this application exclusively to obtain approval for the creation of a research database or registry? [Note: if the creation of the database or registry is part of a bigger project also included in this application, you must answer no below].</i>	no
4.8. <i>Class-based research and the department level research ethics review process Is this study a minimal risk class-based research project conducted for pedagogical purposes, e.g., a research methods course exercise, or other exercises designed to give students training in conducting and/or presenting research? The activity should not be an undergraduate or graduate thesis/dissertation.</i>	no
<i>If Yes, please state whether your department has a Departmental Ethics Officer (DEO) and, if so, indicate their name below.</i>	
5. Summary of Study and Recruitment - Human Ethics Application for Behavioural Study [View Form]	
5.1.A <i>Provide a short summary of the project written in lay language suitable for non-scientific</i>	Costa Rica is widely known for its biodiversity including bird species. Understanding which bird species are preferred among different groups is important for designing future conservation interventions. We intend to survey 300 participants (i.e., local residents, eco-tourists, and birdwatchers) in northwestern Costa Rica. In our survey, participants will be presented with images of

REB members. DO NOT exceed 100 words and do not cut and paste directly from the study proposal.	different bird species. First they will indicate whether they know each species, then they will rate the perceived importance of each bird species for cultural ecosystem services, such as the species that are relevant for recreation and identity values. They will also indicate their connectedness to each species and perceived responsibility towards them. Our results will reveal how different groups of people prioritize bird species for a variety of cultural values.
5.1.B Summarize the research proposal:	The main objective of this research is to investigate which characteristics of birds (e.g., color, size, bill morphology) can predict the provision of three cultural ecosystem services (i.e., ecosystems' contributions to the non-material benefits, such as capabilities and experiences, that arise from human–ecosystem relationships): (1) recreation values (i.e., birds that are important for bird-watching), (2) identity values (i.e., birds that provoke a sense of belonging; people's national, regional, local or individual identity), and (3) bequest values (i.e., birds that people would hope others will get to see in the future). We seek to provide answers to the following research questions: Do bird characteristics drive cultural ecosystem services? Do such characteristics drive such values more strongly than familiarity (e.g., prior knowledge of species), or does familiarity trump characteristics? Do people feel connected to bird species, or responsible for them? Are such connections and perceived responsibilities correlated with any traits? This research will take place in northwestern Costa Rica. The region's biodiversity is extensive, holding more than 250 bird species. This region is highly visited by experienced birders, and ecotourists, while also having local communities, so it allows us to survey the populations appropriate to answer each of our research questions. To quantify bird-mediated cultural services, we will survey 300 participants: local residents (n=100), eco-tourists (n=100), and birdwatchers (n=100). Participants will complete a survey on a laptop computer. The survey will first ask open-ended questions about cultural ecosystem services provided by birds, with write-in responses. For example: (1) To prompt recreation values we will ask people whether there are birds that they enjoy watching or hearing. (2) To prompt identity values we will ask people whether there are birds that are important to their sense of identity (including national, regional, local, and individual aspects). (3) To prompt bequest values we will ask people whether there are birds that they would like to protect for the future including kids in their community. Then participants will be presented with images and sound recordings from 50 bird species. They will be asked whether they have seen or heard the bird before, and they will be asked to identify the species if they can. Next, participants will view extra information (e.g., information about the social

	behaviour of species) and will be asked to rate on a scale (from 0=not at all to 5=extremely) how important each species is to them for each cultural service (i.e., recreation, identity, bequest), their preference for each species, how connected they feel to each species and their perceived responsibility towards each species. Lastly, demographic information (e.g., age, religious affiliation) will be collected.
<i>5.2. Inclusion Criteria Describe the participants being selected for this study, and list the criteria for their inclusion.</i>	We have three groups of participants (locals, eco-tourists, birders/ornithologists). The criteria for inclusion for the three groups is the following: 1. Locals: Any adult (+18 years old) local resident living in the major towns of the Nicoya Peninsula (e.g., Cañas, Bagaces, Sámará, Nicoya) who has lived there for more than 5 years is eligible. Given that these towns are located in rural areas of Costa Rica, we hope to get some people who work in farms and others who do not, to get a full understanding on how locals perceive birds. 2. Eco-tourists: We define eco-tourists as tourists who visit Northwestern Costa Rica because of its biodiversity. They are the people who stay in eco-lodges, and who get involved in eco-tourism activities such as turtle watching, snorkelling, and bird watching, but who are not bird experts. Only adults (+18 years old) will be eligible. 3. Birders and ornithologists: We define them as those who have professional training in bird ecology, ornithology, or bird conservation, and those who are avid birders with more than 5 years of experience. Importantly, we only need people who have been to Costa Rica before, or who know Costa Rican bird species well (i.e., other neotropical bird ecologists and ornithologists would be part of our sample). Only adults (+18 years old) will be eligible.
<i>5.3. Exclusion Criteria Describe which participants will be excluded from participation, if any, and list the criteria for their exclusion.</i>	We will not discriminate participants in our study, unless they do not fit our inclusion criteria or unless they do not fit in any category.
<i>5.4. Recruitment Provide a detailed description of the method of recruitment. For example, describe who will contact prospective participants and by what means this will be done. Ensure that any letters of initial contact or other recruitment materials are attached to this submission on view 9 (section 9.7).</i>	Local residents will be recruited in towns across the Nicoya Peninsula (Cañas, Bagaces, Sámará, Nicoya). Given that we are already conducting some work in this region (for biophysical purposes), we have developed a strong partnership with the Nicoyagua foundation, which mediates our connections with local communities. We will use this partnership, and ask our local partners to help us recruit participants, by giving them letters of initial contact to distribute among local residents. In addition, we will post information letters in common areas such as stores in neighbourhoods or parks, inviting people to participate in the study, and the researcher will walk to crowded areas to invite people to take part of the surveys. Eco-tourists will be recruited via ecotourism agencies and institutions that we have already partnered with. For example, Javier from Dónde Javi Tours in Sámará owns an eco-tourism company that takes tourists to watch turtle nests, snorkelling and hiking. We will ask Javier to ask his clients if they are interested in filling the survey. Additionally, we will ask other local companies like Dónde

	Javi Tours, to get their help. Birdwatchers (including ornithologists) will be contacted via local bird guides, and expert ornithologists who can help us distribute surveys through their networks. We have partnered with Jim Zook, an experienced ornithologist who lives in Costa Rica. He will help us disseminate our surveys through his network. In addition, we will send our surveys to our contact lists that include professors and researchers in the field of tropical ornithology.
5.5. <i>Use of Records</i> If existing records (e.g., health records, course grade sheets or other records/databases) will be used to IDENTIFY potential participants, please describe how permission to access this information, and to collect and use this information, will be obtained.	N/A
5.6. <i>Summary of Procedures</i>	1. Provide letter for initial contact to recruit participants. 2. Recruit participants. 3. Assign a time slot for each participant. 4. Bring a laptop and get participants to do the survey, which will be done on a one-by-one case. 5. Take pictures of some participants for presentation purposes, and get participant's consent for the future use of these pictures. 6. Finish data collection. 7. Data analysis at UBC. Alejandra will design and implement the surveys. First, participants will be recruited and will be assigned a time slot for completing the survey on a laptop. Then, participants will receive a consent form and once it is signed, Alejandra will set up the survey to record the data. Participants will take about an hour to complete it. A draft in English of what the survey is expected to look like is attached. The finalized survey will be translated into Spanish and attached to the online application when it is available. Given that this survey has multimedia components, the questions will be available, but excluding the sounds and interactive parts of it. Alejandra will take pictures of some participants while they complete the surveys. These pictures will be used for future presentations of this work (e.g., defence slides, conference talks). Alejandra will get participant's consent for the use of their pictures for academic purposes.
5.7. <i>Checklist for Research Methods</i> Are any of the following procedures or methods involved in this study? Check all that apply.	Community Based Research
6. Participant Information and Consent Process - Human Ethics Application for Behavioural Study [View Form]	
6.1. <i>Time to Participate</i> How much time will a participant be asked to dedicate to the project?	Each survey will take approximately 1 hour to complete. Follow-up questions are not required, so it will only be the time of the survey.
6.2. <i>Risks</i> Describe what is known about the risks of the proposed research for participants.	There is no physical risk involved. Psychological or emotional risks are negligible. If at any point, participants feel uncomfortable, the study can be ended at any time. Participants will also be able to retract information after survey completion.

6.3. <i>Benefits</i> Describe any potential benefits to the participant that could arise from his or her participation in the proposed research.	One of the aims of this project is to effectively inform conservation campaigns for bird species. Overall, Costa Ricans will benefit with these results by helping them protect their own biodiversity. For eco-tourists and birders, the benefits of these research mostly rely on the long-term goals for biodiversity protection, that ultimately allow them to keep doing what they enjoy doing (e.g., birdwatching, studying/researching bird species).					
6.4. <i>Impacts on Community</i> If your research involves an identified group or 'community', outline the likely impacts of the research on the community.	This project is mostly about understanding their perceptions of birds, so we do not anticipate any negative impacts on local communities.					
6.5. <i>Reimbursement</i> Describe any reimbursement for expenses (e.g., meals, parking, medications) or payments/gifts-in-kind (e.g., honoraria, gifts, prizes, credits) to be offered to the participants. Provide full details of the amounts, payment schedules, and value of gifts-in-kind.	No payments are anticipated at this time.					
6.6. <i>Obtaining Consent</i> Specify how potential participants will be invited to take part in the study. Include details of where the consent will be obtained and documented, and under what circumstances.	The researcher (Alejandra Echeverri) will benefit from the partnerships with local agencies to recruit local participants and obtain their consent for participation. These partnerships include the Nicoyagua foundation, Dónde Javi Tours, and the network of ornithologists and birders mediated by the local ornithologist Jim Zook. The researcher will also post information letters in common areas, such as stores in neighbourhoods or parks, inviting people to participate in the study. The letters will have the contact information of the researcher. In addition, the researcher will walk to crowded areas and invite people to take the surveys. Both the researcher and the local partners will use the same dialogue that will serve initial contact purposes (see attached documents). Once participants agree to take the surveys, they will be handed a consent form that they will read and sign (see attached documents). This consent form will be available in Spanish for local residents, and in english for eco-tourists. Consent will always be obtained before starting data collection with any participant.					
6.6.A. <i>Waiver of Consent</i> If you are asking for a waiver or an alteration of the requirement for participant informed consent please justify the waiver or alteration and confirm that the study meets the criteria on the right. Please address each criterion individually.	N/A					
6.7. <i>Time to Decide</i> How long after being provided with detailed information about the study will the participant have to decide whether or not to participate? Provide your rationale for the amount of time given.	Participants will have no less than a day to decide. Given that the researcher will need to schedule the timeslots to conduct the surveys, and only one survey can be conducted at a time, then this will allow participants to think about their decision to conduct this survey.					
6.8. <i>Capacity to Consent</i> Will every participant have the capacity to give fully informed consent on his/her own behalf? Please click Select to complete the question and view further details.	<table><tr><td>Will the participant have the capacity to give fully informed consent?</td><td>Details of the nature of the incapacity</td><td>If not, who will consent on his/her behalf?</td><td>If not, will he/she be able to give assent to participate?</td><td>If Yes, explain how assent will be sought.</td></tr></table>	Will the participant have the capacity to give fully informed consent?	Details of the nature of the incapacity	If not, who will consent on his/her behalf?	If not, will he/she be able to give assent to participate?	If Yes, explain how assent will be sought.
Will the participant have the capacity to give fully informed consent?	Details of the nature of the incapacity	If not, who will consent on his/her behalf?	If not, will he/she be able to give assent to participate?	If Yes, explain how assent will be sought.		

	Yes [Details]
6.9. <i>Renewal of Consent</i> Describe any situation in which the renewal of consent for this research might be appropriate, and how this would take place.	N/A
6.10. <i>Provisions for Consent</i> What provisions are planned for participants, or those consenting on a participant's behalf, to have special assistance, if needed, during the consent process (e.g., consent forms in Braille, or in languages other than English).	The letters of initial contact, the consent forms, the instructions for the procedure, and the survey itself will be provided in Spanish and English. Alejandra is bilingual, so she can easily solve any questions and doubts that participants may have.
6.11. <i>Restrictions on Disclosure</i> Describe any restrictions regarding the disclosure of information to research participants (during or at the end of the study) that the funder/sponsor has placed on investigators, including those related to the publication of results.	N/A
7. Number of Participants - Human Ethics Application for Behavioural Study [View Form]	
7.1. <i>External Approvals</i> External approvals for research involving other institutions and other jurisdictions: Provide written proof of agency approval for projects carried out at other institutions and, when applicable, other jurisdictions. Indicate external approvals below: A. Other Institutions:	no
B. Please select Add to enter the name of the institution and if you have already received approval attach the approval letter.	Name of Institution
C. Other Jurisdiction or Country (if answer is No go to 7.1.G):	yes
D. Please select Add to enter the name of the jurisdiction or country and if you have already received approval attach the approval letter.	Name of Jurisdiction or Country Costa Rica
E. Has a Request for Ethics Approval been submitted to the institution or responsible authority in the other jurisdiction or country? (Send a copy to the Research Ethics Office when approval is obtained).	no
F. If a Request for Approval has not been submitted, provide the reasons below:	The proposed study does not require permission from Costa Rican authorities, for the following reasons: this research is not linked to any Costa Rican institution, but rather focuses on personal experiences of participants. Since the participants are adult and the focus of the study is their personal experiences with birds, institutional approval is not necessary. In addition, given that we are not partnered with a Costa Rican University, there is not an established Ethics Boards for social sciences research available to this project, and participation in this type of research is carried out on the grounds of good will. However, to mitigate any possible damages, we have partnered with foundations to enhance our communication with local communities and minimize negative attitudes that might arise.
G. Does this research focus on aboriginal peoples, communities or organizations?	no

<i>If Yes, ensure that you are familiar with the guidance documents linked on the right. Also attach a copy of the research agreement with the community (if available) in question 9.7. Please describe the community consent process. If no community consent is being sought, please justify.</i>							
<i>H. Registration for Publication of Clinical Trials. Does this study fall within the clinical/intervention trial definition stated on the right (in the guidelines)?</i>	no						
<i>If 'Yes', click 'Add' to enter the following information. (Please note that registration by UBC ORS administration requires the prior ethical approval of the study. In that case, registration information should be added when it becomes available).</i>	<table border="1"> <tr> <td data-bbox="722 422 878 520">Has it been registered?</td> <td data-bbox="878 422 1154 520">Indicate the Authorized Registry used:</td> <td data-bbox="1154 422 1468 520">Enter your Clinical Trial unique identifier:</td> </tr> <tr> <td data-bbox="722 520 878 590"></td> <td data-bbox="878 520 1154 590"></td> <td data-bbox="1154 520 1468 590"></td> </tr> </table>	Has it been registered?	Indicate the Authorized Registry used:	Enter your Clinical Trial unique identifier:			
Has it been registered?	Indicate the Authorized Registry used:	Enter your Clinical Trial unique identifier:					
<i>7.2. Number of Participants A. How many participants will take part in the entire study (i.e., the entire study, world-wide)?</i>	300						
<i>B. How many participants will take part at institutions covered by this Research Ethics Approval (i.e., only at the institutions covered by this approval)?</i>	300						
<i>7.3. Researcher Qualifications Who will actually conduct the study and what are their qualifications to conduct this kind of research? (e.g., describe relevant training, experience, degrees, and/or courses).</i>	This study will be conducted by Alejandra Echeverri. Alejandra is a first year PhD student in the Resource Management and Environmental Studies (RMES) program at UBC. She holds an MSc degree in RMES from UBC, and a BSc degree from Universidad de los Andes (Colombia). Alejandra has done over 5 years of work with local communities doing environmental education and public outreach. Given that Spanish is her first language, she has no language barriers communicating with local communities in Costa Rica. In addition, for her MSc degree she conducted experiments with research methods from environmental psychology. Therefore, she is familiar with the research methodologies required to conduct this study. Regarding ethics training for community based research, Alejandra has completed the TCPS2 2014 Introductory Tutorial (CORE), and has attended workshops about ethics in community based research, such as the "Ethics and pragmatism in Indigenous Research" from UBC Centennial workshop series (2016). Alejandra is registered with the Go Global Office, and understands their safety policies. She will comply with their travel safety policies.						
8. Confidentiality - Human Ethics Application for Behavioural Study [View Form]							
<i>8.1. Security of Data During the Course of the Study How will data be stored? (E.g., computerized files, hard copy, videotape, audio recordings, personal electronic communications device, other.) How will security of the data be maintained? (For example, study documents must be kept in a secure locked location and computer files should be password protected and encrypted, data should not be stored or downloaded onto an unsecured computer, back up files should be</i>	Data will be stored electronically, mainly in excel formats, on the researchers' laptop and desktop hard-drives. Some photos may be taken while participants conduct the studies for presentation purposes, but written consent for their pictures will be collected. All such electronic files will be password protected and encrypted following the information security standards from UBC. We will get help from UBC IT Encryption Services to meet their encryption requirements at the time of data						

<i>stored appropriately.) If any data or images are to be kept on the Web, what precautions have been taken to prevent them being copied?</i>	storage. Access to the computer hard-drives will also be password protected and encrypted.
<i>8.2. Access to Data Who will have access to the data (e.g., co-investigators, students or translators)? How will all of those who have access to the data be made aware of their responsibilities concerning privacy and confidentiality issues?</i>	Given that we partnered with local agencies such as Nicoyagua, we agreed to show the research results to them. Alejandra will present in person research results broadly, in a non-technical language. She will show major findings (i.e., peoples' perceptions of birds and differences between groups, the most important birds to different groups of people) by giving them a powerpoint presentation in Spanish. The details of this presentation and the venue for it are yet to be defined, as we need to conduct the study first. However, we will work closely with Xinia Campos (local partner) who can help us find some space and time for this presentation. We believe that sharing results back with the community is an important part of conducting community-based research ethically. Only the PI, co-investigators and researchers (i.e., Dr. Kai Chan, Dr. Jiaying Zhao, Dr. Daniel Karp, Dr. Robin Naidoo, and Alejandra Echeverri) will have access to the raw data. All investigators and researchers will have to read and abide by the code of ethics from UBC.
<i>8.3. Protection of Personal Information Describe how the identity of research participants will be protected both during and after the research study, including how participants will be identified on data collection forms.</i>	The identity of the participants in this study will be strictly protected by assigning codes to all subjects (e.g., S001, S002, etc). While we intend to collect demographic information for the purposes of the analyses, we will not disclose names or any personal information in any of the reports or articles written as a result of this study.
<i>8.4. Transfer of Data Will any data that identify individuals be transferred (available) to persons or agencies outside of the University?</i>	no
<i>If YES, describe in detail what identifiable information is released, to whom, how the data will be transferred, how and where it will be stored and what safeguards will be used to protect the identity of participants and the privacy of their data. Attach the data transfer agreement if applicable.</i>	
<i>8.5. Retention and Destruction of Data UBC policy requires that data be kept for at least 5 years within a UBC facility. If you intend to destroy the data at the end of the storage period describe how this will be done to ensure confidentiality (e.g., tapes should be demagnetized, paper copies shredded). UBC has no explicit requirement for shredding of data at the end of this period and it may be kept indefinitely. Please note that the responsibility for the security of the data rests with the Principal Investigator.</i>	There are currently no specific plans in place to destroy the data after the necessary retention period of 5 years. However, once the data collection is completed, the PI, together with the researchers will establish a protocol for ensuring lasting confidentiality after the requisite 5 year period, which may or may not involve deletion or shredding. The PI (Dr. Kai Chan) will store the data during the data retention period on his computer/server at the Institute for Resources, Environment, and Sustainability, located at UBC (AERL, 4th floor).
<i>8.6. Future Use of Data Are there any plans for future use of either data or audio/video recordings? Provide details, including who will have access and for what purposes, below.</i>	There are no current plans for future use of data.

8.7. Feedback to Participants Are there any plans for feedback on the findings or results of the research to the participant? Provide details below.	At the end of the study, we intend to share findings and results back with local communities and with birders/ornithologists. For local communities we intend to go back to the field site and present in a simplified way the study results and the implications for our research. In addition, we intend to share our results with the birders and ornithologists by widely distributing the publications generated from this research. Eco-tourists will not receive feedback or findings given that they are a loose community, and it would be hard to reach them again after data has been collected. But we will ask them to share their email address with us, in case they are interested on receiving an electronic report of research results.

9. Documentation - Human Ethics Application for Behavioural Study [\[View Form\]](#)

9.1. Research Proposal Examples of types of proposals are listed on the right. Click Add to enter the required information and attach the documents.	Document Name	Version Date	Password (if applicable)
	Research proposal CES provided by birds	March 17, 2016	[View]
9.2. Documentation of Consent Examples of types of consent documents are listed on the right. Click Add to enter the required information and attach the documents.	Document Name	Version Date	Password (if applicable)
	Consent forms in English and Spanish v2.0	2.0 April 9, 2016	[View]
	Consent forms in English and Spanish	1.0 March 17, 2016	[View]
9.3. Documentation of Assent Examples of types of assent documents are listed on the right. Click Add to enter the required information and attach the documents.	Document Name	Version Date	Password (if applicable)
9.4. Advertisement to Recruit Participants Examples are listed on the right. Click Add to enter the required information and attach the documents.	Document Name	Version Date	Password (if applicable)
	Advertisements in English and Spanish v2.0	2.0 April 9, 2016	[View]
	Advertisements in English and Spanish	1.0 March 17, 2016	[View]
9.5. Questionnaire, Questionnaire Consent Cover Letter, Tests, Interview Scripts, etc. Please click Add to enter the required information and attach the documents.	Document Name	Version Date	Password (if applicable)
	Survey sample	1.0 April 9, 2016	[View]
9.6. Letter of Initial Contact Please click Add to enter the required information and attach the forms.	Document Name	Version Date	Password (if applicable)
	Letter of initial contact in English and Spanish v2.0	2.0 April 9, 2016	[View]

	Letters of initial contact in English and Spanish	1.0	March 17, 2016	[View]
<i>9.7. Other Documents A. Other documents: Examples of other types of documents are listed on the right. Click Add to enter the required information and attach the documents.</i>	Document Name	Version	Date	Password (if applicable)
	Letter of support from local community (translated)		March 17, 2016	[View]
	Letter of support from local community (original)		March 11, 2016	[View]
<i>B. If a Web site is part of this study, enter the URL below. Since URL's may change over time or become non-existent, you must also attach a copy of the documentation contained on the web site to one of the sections above or provide an explanation.</i>
