# AsPredicted Pre-registration Template (v2.00)

**Fillable PDF.** Click a blue box to type; tick the small squares. Save with **File › Save** and attach the saved PDF to your assignment. Works best in the free Adobe Acrobat Reader; macOS Preview and web browsers also work. If an answer does not fit its box, continue it on an extra page. Source: `Step_05_Preregistration_and_Open_Science/aspredicted_template.md` (rebuild with `tools/make_fillable_pdfs.py`).

Fill this form and submit at **https://aspredicted.org/create.php** to obtain a time-stamped, citable pre-registration URL.

Cross-references to the corresponding section of `preregistration_template.md` are noted in brackets for each question.

---

## Question 1 — Data collection

*Have any data been collected for this study already?*

☐ No, no data have been collected for this study yet. ← **required for valid pre-registration**

☐ It's complicated. We have already collected some data but explain in Question 8 why readers may consider this a valid pre-registration nevertheless.

⚠ Answering "Yes, we already collected the data" is **not accepted** by AsPredicted and constitutes HARKing if hypotheses are written post-hoc.

**Answer:**

---

## Question 2 — Hypothesis

*What's the main question being asked or hypothesis being tested in this study?*

Map each entry here to a confirmatory hypothesis (H1, H2, …) in Section 2.2 of `preregistration_template.md`.

State hypotheses in directional form where theory supports it.

Example: "*Participants with higher place identity scores will report stronger pro-conservation behavioral intentions (H1).*"

**Answer:**

---

## Question 3 — Dependent variable

*Describe the key dependent variable(s) specifying how they will be measured.*

Map to Sections 5.1–5.2 of `preregistration_template.md`.

Include: variable name, scale name, number of items, response format, scoring procedure.

Example: "*Pro-conservation behavioral intentions: 5-item scale (Kaiser, 1998), 7-point Likert (1 = strongly disagree, 7 = strongly agree), mean score.*"

**Answer:**

---

## Question 4 — Conditions

*How many and which conditions will participants be assigned to?*

Map to Section 4 of `preregistration_template.md`.

If purely observational/survey: state "One condition — no experimental manipulation" and describe the sampling groups if any.

Example (experiment): "*Two between-subjects conditions: (1) restoration framing message vs. (2) control (no message).*"

Example (survey): "*One condition. All participants complete the same survey. Subgroups (urban vs. rural) will be compared as a pre-specified moderator analysis.*"

**Answer:**

---

## Question 5 — Analyses

*Specify exactly which analyses you will conduct to examine the main question/hypothesis.*

Map to Section 8 of `preregistration_template.md`.

Include: statistical test, outcome variable, predictor(s), covariates, software/package, alpha level, and any multiple-comparison correction.

Every analysis listed here is **confirmatory**. Any analysis not listed is **exploratory**.

Example: "*Multiple linear regression predicting mean pro-conservation intentions (Q3) from place identity (continuous), controlling for age, gender, and urban/rural status. R, lm(). α = .05, no correction (single primary test). Standardized β will be reported.*"

**Answer:**

---

## Question 6 — Outliers and exclusions

*Describe exactly how outliers will be defined and handled, and your precise rule(s) for excluding observations.*

Map to Section 7 of `preregistration_template.md`.

Be operationally precise — avoid vague language like "poor quality responses."

Specify: attention check rules, completion time thresholds, response pattern checks (e.g., straight-lining), missing data rules, and outlier winsorizing/trimming rules.

Example: "*Exclusion: (1) < 2 of 3 attention checks correct; (2) survey completed in < 90 seconds; (3) > 20% item non-response on any scale. Outliers: values > 3 SD from the scale mean will be winsorized to 3 SD.*"

**Answer:**

---

## Question 7 — Sample size

*How many observations will be collected or what will determine sample size?*

Map to Section 6 of `preregistration_template.md` and `Step_09_Power_and_Sampling/`.

State the target N, how it was determined (power analysis parameters), and the stopping rule.

Example: "*Target N = 350 complete responses, based on a power analysis for multiple regression ($f^2 = 0.10$, $\alpha = .05$, power = .90, 6 predictors; G*Power 3.1). Data collection ends when N = 350 or on [date], whichever comes first.*"

**Answer:**

---

## Question 8 — Other (secondary analyses, exploratory variables, unusual plans)

*Anything else you would like to pre-register?*

Map to Section 9 (exploratory analyses) of `preregistration_template.md`.

Use this field to declare: (a) pre-specified contingency analyses (fallbacks), (b) secondary/exploratory analyses, (c) variables collected for descriptive or future use, (d) any complications with data collection that may challenge the pre-registration's validity.

Example: "*Secondary analysis: mediation of H1 by emotional connection to nature (Hayes PROCESS Model 4; exploratory). We also include an open-ended question asking participants to describe their local landscape; these responses will be coded thematically but results are exploratory and will not be used to evaluate H1.*"

**Answer:**

---

## Question 9 — Title

*Give a title for this AsPredicted pre-registration.*

Suggestion: Project name + study description + date.

Example: "*SOCIO-ECOLOGICAL SURVEY — Place identity and conservation intentions, Colombia, [Month Year]*"

**Answer:**

---

### Question 10 — Type of study

- [ ] Class project or assignment
- [ ] Experiment
- [ ] Survey
- [ ] Observational / archival study
- [ ] Other:

**Answer:**

---

### Question 11 — Data source

- [ ] Prolific
- [ ] MTurk
- [ ] Credamo
- [ ] Cloud Research
- [ ] University lab
- [ ] Field experiment / RCT
- [ ] Other:

**Answer:**

---

## After submission

1. Copy the AsPredicted URL (e.g., `https://aspredicted.org/xx999.pdf`) into Section 1 of `preregistration_template.md`.

2. Save a local copy of the submitted PDF in this folder as `aspredicted_submitted_YYYY-MM-DD.pdf`.
3. Run through `preregistration_checklist.md` before beginning data collection.
